Students learn about engineering

Submitted story

Thirty students spent the day Dec. 8 at the Technology Center on Engineering Day.

The students were sophomores from Fremont Ross, Clyde, Old Fort, Port Clinton and Gibsonburg high schools.

The students were greeted by Tech Center student adviser Tiffinie Leiter-Jones. The students visited the Computer-Assisted Design and Engineering Technologies and Robotics classrooms in the morning while senior students were there.

At 10:30 a.m., students were bused to Terra Community College, where they were welcomed by Heath Martin, director of advising.

The students then broke into three groups to tour classes. The purpose of these tours is to help sophomore students understand Tech Center programs and how they are linked to mechanical, electrical and digital media classes at Terra.

James Perlberg, Terra Robotics instructor, helps a student during the Engineering Day visit on Dec. 8. Engineering Day is a vital part of recruitment efforts at the Tech Center. (Submitted photo)
